Profile

Peter Scott is an expert-level Oracle data warehousing and business intelligence consultant with many years of project experience in the UK and the Netherlands. Peter is a highly technical, analytical and creative consultant with commercial acumen who consistently produces the right solution at the right time achieving customer satisfaction. He has worked in consultancy, development and support and has delivered both end-user and technical training to customer organisations.

Although Peter has excellent subject knowledge across the whole of Business Intelligence his core expertise centres on data modeling, data warehouse design and data quality management.

- Unix (Sun Solaris, AIX, Dynix), Windows 2000/NT/XP
- Data Modeling, Dimensional modeling, Data Quality Management,
- Data Warehouse tuning

Experience

Lead, Business Intelligence, Getronics UK 1995-2007

Business Intelligence Leader responsible for delivery and pre-sales activities for the BI Consultancy and BI Support groups in the UK. In addition to his role as team mentor, Peter has taken a hands-on involvement in the delivery of several significant Oracle data warehouse and reporting projects in the UK. Recent engagements include: When a major UK cash and carry wholesaler moved from their mainframe based central systems

to a new SAP implementation they took the opportunity to replace their aging data warehouse with a new 2.8 terabyte Oracle data warehouse for sales stock and logistics reporting. Peter was responsible for the overall logical and physical designs of the new data warehouse and led the OWB team in the ETL build process, one significant complexity was the need to cope with both mainframe and SAP feeds during a period of transition.

When a high street Health and Beauty retail decided to re-platform and upgrade their multi-terabyte retail sales, stock and space planning data warehouse, Peter designed the new physical layout, managed the data migration and provided mentoring to the retailer's development team in making the most of Oracle 10g.

For a major water supply company Peter conducted a thorough review of the company's engineering data warehouse. This review identified several areas where the ETL process could be improved and thus reducing the data load batch runtime.
