ODI for BI Applications

Course Overview

Written for ODI 11g Developers, this course is meant to not just show developers and operators "how to", but give them the "why" behind it.

Over three days, these users are shown how to work in ODI Studio and create load plans, as well as navigate Configuration Manager and Functional Setup Manager (domain configuration, step by step project setup).

This course has been developed for Oracle BI Applications 11.1.1.9 , but is just as relevant if your organization is on an earlier release of Oracle BI Applications 11g.

Who Should Attend	Previous Knowledge	Duration
Developers and Tech Leads	Some Experience Preferred	3 Days

Day 1

Using Configuration Manager and Functional Setup Manager
